The ultimate guide to Maxwell layer potentials on the sphere

In this note, we consolidate analytic expressions for various maxwell layer potentials on the sphere. In the following, $P_{nm}(t)$ are the associated legendre polynomials of degree n and order m, $Y_{nm}(\theta,\phi)$, are the spherical harmonics of degree n and order m given by

$$Y_{nm}(\theta,\phi) = \sqrt{2n+1}\frac{(n-|m|)!}{(n+|m|)!}P_{n|m|}(\cos\theta)e^{im\phi}\,. \tag{0.1}$$

Let $\boldsymbol{Y}_{nm}(\theta,\phi), \boldsymbol{\Psi}_{nm}(\theta,\phi), \boldsymbol{\Phi}_{nm}(\theta,\phi)$ denote the vector spherical harmonics given by

$$\begin{aligned}
\boldsymbol{Y}_{nm}(\theta,\phi) &= Y_{nm}(\theta,\phi)\begin{bmatrix}\sin\theta\cos\phi\\ \sin\theta\sin\phi\\ \cos\theta\end{bmatrix}\,,\\
\boldsymbol{\Psi}_{nm}(\theta,\phi) &= -P'_{n|m|}(\cos\theta)\sin\theta\begin{bmatrix}\cos\theta\cos\phi\\ \cos\theta\sin\phi\\ -\sin\theta\end{bmatrix} + \frac{imY_{nm}(\theta,\phi)}{\sin(\theta)}\begin{bmatrix}-\sin\phi\\ \cos\phi\\ 0\end{bmatrix}\,,\\
\boldsymbol{\Psi}_{nm}(\theta,\phi) &= \hat{\boldsymbol{r}}\times\boldsymbol{\Psi}_{nm}(\theta,\phi)\,.
\end{aligned} \tag{0.2}$$

Let $j_n(z), h_n(z)$ denote the spherical Bessel and spherical Hankel functions of degree n. Let Ω be the interior of the unit sphere $\partial\Omega$ denote it's boundary. Finally, let $\mathcal{S}_k[\sigma]$ denote the Helmholtz single layer potential given by

$$\mathcal{S}_k[\sigma](\boldsymbol{x}) = \int_{\partial\Omega}\frac{e^{ik|\boldsymbol{x}-\boldsymbol{y}|}}{|\boldsymbol{x}-\boldsymbol{y}|}\sigma(\boldsymbol{y})dS_{\boldsymbol{y}}\,. \tag{0.3}$$

For any $\boldsymbol{x}\in\Omega$, let (r,θ,ϕ), denote it's spherical coordinates. Then the following equalities hold:

$$\begin{aligned}
\mathcal{S}_k[\boldsymbol{\Psi}_{nm}](\boldsymbol{x}) &= in(n+1)\left(\frac{j_n(kr)}{kr}\left(h_n(k)+kh'_n(k)\right)+j'_n(kr)h_n(k)\right)\boldsymbol{Y}_{nm}(\theta,\phi)+\\
&\quad i\left(\left(j'_n(kr)+\frac{j_n(kr)}{kr}\right)\left(h_n(k)+kh'_n(k)\right)+n(n+1)h_n(k)\frac{j_n(kr)}{kr}\right)\boldsymbol{\Psi}_{nm}(\theta,\phi)\,,\\
\mathcal{S}_k[\boldsymbol{\Phi}_{nm}](\boldsymbol{x}) &= ikj_n(kr)h_n(k)\boldsymbol{\Phi}_{nm}(\theta,\phi)\,,\\
\nabla\mathcal{S}_k[Y_{nm}](\boldsymbol{x}) &= ik^2h_n(k)j'_n(kr)\boldsymbol{Y}_{nm}(\theta,\phi)+ikh_n(k)\frac{j_n(kr)}{r}\boldsymbol{\Psi}_{nm}(\theta,\phi)\,,\\
\nabla\times\mathcal{S}_k[\boldsymbol{\Psi}_{nm}](\boldsymbol{x}) &= -ikj_n(kr)\left(h_n(k)+kh'_n(k)\right)\boldsymbol{\Phi}_{nm}(\theta,\phi)\,,\\
\nabla\times\mathcal{S}_k[\boldsymbol{\Phi}_{nm}](\boldsymbol{x}) &= -in(n+1)kh_n(k)\frac{j_n(kr)}{r}\boldsymbol{Y}_{nm}(\theta,\phi)-ih_n(k)k^2\left(j'_n(kr)+\frac{j_n(kr)}{kr}\right)\boldsymbol{\Psi}_{nm}(\theta,\phi)\,,\\
\nabla\times\nabla\times\mathcal{S}_k[\boldsymbol{\Psi}_{nm}](\boldsymbol{x}) &= in(n+1)k\frac{j_n(kr)}{r}\left(h_n(k)+kh'_n(k)\right)\boldsymbol{Y}_{nm}(\theta,\phi)+\\
&\quad i\left(k^2j'_n(kr)+k\frac{j_n(kr)}{r}\right)\left(h_n(k)+kh'_n(k)\right)\boldsymbol{\Psi}_{nm}(\theta,\phi)\,,\\
\nabla\times\nabla\times\mathcal{S}_k[\boldsymbol{\Phi}_{nm}](\boldsymbol{x}) &= ik^3j_n(kr)h_n(k)\boldsymbol{\Phi}_{nm}(\theta,\phi)\,.
\end{aligned} \tag{0.4}$$
